1. Product Overview

GreenArch is a hyperlocal gardening platform designed specifically for urban India. It bridges the gap between plant lovers, local nurseries, and skilled gardeners by providing a single, seamless digital ecosystem. Whether you want to transform your balcony into a green retreat, find a trusted maali for regular maintenance, or order rare plants from a nursery 2 km away — GreenArch makes it happen in minutes.

Product Name	GreenArch
Type	Hyperlocal Service + Commerce Marketplace
Initial Market	Greater Noida, Uttar Pradesh, India
Target Launch	Q3 2025 (Web MVP)
Stage	Pre-Seed / Idea Validation
Founder	BTech Student — Greater Noida

What GreenArch Connects

Users (Buyers)	Nurseries (Sellers)	Gardeners (Service)
Browse & order plants Track deliveries Book gardeners Rate & review	List products & inventory Receive & manage orders Earnings dashboard Premium listings	Accept booking requests View schedule & history Get rated by users Earn reliably

2. Problem Statement

The gardening ecosystem in Indian cities is broken. Despite a growing culture of indoor plants, terrace gardens, and green-living, urban residents face consistent frustrations when trying to fulfil even basic gardening needs. The problems are fragmented, but together they represent a significant unmet market.

1 No Trusted Gardener Directory

Finding a reliable maali in cities like Greater Noida is done through word-of-mouth, society WhatsApp groups, or trial-and-error. There is no verified, rated platform. Users have no way to compare pricing, check reviews, or ensure professional quality.

2 Fragmented Nursery Discovery

Local nurseries operate mostly offline or via Instagram with inconsistent availability. Buyers must physically visit multiple nurseries to find specific plants, with no way to check stock, compare prices, or place orders digitally.

3 Unreliable Plant Delivery

Plants are fragile. Existing general delivery platforms (Dunzo, Porter) are not optimised for plants — wrong packaging, delays, and damaged goods are common. Same-day or scheduled delivery from local nurseries simply does not exist in most areas.

4 No Unified Green Living Platform

A user who wants to set up a balcony garden must separately search for plants, find a gardener, buy soil and pots, and arrange delivery. There is no single platform that handles this end-to-end journey.

3. Proposed Solution

GreenArch solves these problems by building a hyperlocal, three-sided marketplace that unifies plant commerce, gardening services, and local delivery under one roof. The platform is designed to be launched city-by-city, starting with Greater Noida, with a phased rollout approach that prioritises early validation over premature scaling.

Problem	GreenArch Solution
No trusted gardener directory	Verified maali profiles with ratings, pricing, and booking
Fragmented nursery discovery	Location-based nursery listing with real-time inventory

Unreliable plant delivery	Nursery-fulfilled delivery with ETA — same-day where possible
No unified platform	Single app for discovery, booking, ordering, and tracking

4. Target Users & Personas

Primary Users (Demand Side)

Urban Homeowners	30–55 yrs
Has a garden or terrace, wants reliable maintenance and plant supply	
Apartment Residents	25–40 yrs
Indoor plant enthusiasts, limited space, needs occasional gardener	
Plant Hobbyists	20–45 yrs
Actively seeks new plant varieties, willing to order online	

Supply Side Partners

Local Nurseries	Business
Wants digital presence, more customers, easy order management	
Maalis / Gardeners	Service
Wants steady, reliable work with transparent payments	

5. Core Features

5.1 User App / Website

Discovery & Search

- Automatic location detection via browser GPS
- Nearby nurseries listed by proximity (radius filter: 2–10 km)
- Filters: distance, rating, price range, plant category
- Search bar for specific plants or products
- Nursery profile pages with photos, hours, ratings

Plant Store

- Product listings with images, description, price, stock status
- Categories: Indoor Plants, Outdoor Plants, Succulents, Pots, Soil, Tools
- Add to Cart with quantity selector
- Checkout: COD and UPI payment supported
- Order confirmation with estimated delivery time

Gardener Booking

- Browse available maalis with profile, skills, and ratings
- Select service type: one-time visit, monthly maintenance, garden setup
- Time slot selection (AM/PM with date picker)
- In-app chat or WhatsApp redirect for coordination
- Post-service rating and review system

Orders & Tracking

- Real-time order status: Confirmed → Packed → Dispatched → Delivered
- Order history with reorder option
- Booking history for gardener services
- Push notifications for status updates

5.2 Nursery Partner Panel

Feature	Description
Signup / Login	Email or phone-based onboarding with business verification
Product Management	Add, edit, delete listings with image upload and stock count
Inventory Alerts	Low stock notifications to prevent order failures
Order Management	Accept or decline incoming orders, update status in real-time
Earnings Dashboard	View daily/weekly earnings, commission deductions, payout history

Premium Listing	Pay to appear higher in search results and category pages
-----------------	---

5.3 Gardener (Maali) Panel

Feature	Description
Profile Setup	Name, photo, service areas, skills, and availability calendar
Booking Requests	Accept or decline service requests from users
Schedule View	Weekly calendar view of upcoming confirmed bookings
Earnings Tracker	Per-booking earnings with platform fee shown transparently
Rating & Reviews	View ratings received from users after each completed service

5.4 Admin Panel

Module	Capabilities
User Management	View, verify, block/unblock users and partners
Nursery Management	Approve nursery signups, manage premium listings
Gardener Management	Verify maali identity, handle disputes
Order Management	Full order view, issue resolution, refund initiation
Bookings Management	Monitor all service bookings and completion rates
Analytics Dashboard	DAU, orders/day, conversion rate, revenue, top nurseries
Payment Tracking	Commission collected, payouts pending, failed transactions

6. User Flow

6.1 Buyer (End User) Flow

1	Open App / Website User lands on home screen; location detected automatically
2	Discover Browse nearby nurseries OR search for a specific plant
3	Explore View nursery profile, browse product listings with photos & prices
4	Add to Cart Select products, choose quantity, apply any coupons
5	Checkout Choose delivery slot, enter address, select COD or UPI
6	Order Placed Confirmation sent via app notification + SMS
7	Track Order Real-time status updates from nursery to doorstep
8	Delivered Rate the nursery and product after delivery

6.2 Nursery Partner Flow

- **Step 1:** Sign up and get approved by admin (within 24 hrs)
- **Step 2:** Add products with photos, descriptions, prices, and stock counts
- **Step 3:** Receive order notification → Review order details → Accept or Decline
- **Step 4:** Prepare and pack the order
- **Step 5:** Hand off to delivery person (own staff or third-party logistics)
- **Step 6:** Mark order as Dispatched → Delivered
- **Step 7:** Earnings credited after delivery confirmation (T+1 settlement)

7. Location & Delivery System

GreenArch's location intelligence is central to its hyperlocal promise. The system uses Google Maps APIs to provide precise nursery discovery, distance-based filtering, and delivery estimation.

Component	Details
Location Detection	Browser GPS or manual address entry with autocomplete
Radius Filtering	Default 5 km; user can adjust from 2 km to 15 km
Distance Display	Show distance in km for each nursery card
Maps Integration	Google Maps API — nursery pins on interactive map view
Delivery ETA	Estimated based on nursery distance + prep time (shown at checkout)
Delivery Model (MVP)	Nursery-fulfilled: nursery uses own delivery staff or rider
Same-Day Promise	Only shown when nursery confirms same-day availability
Future: Logistics	Third-party tie-up (Porter/local courier) after Phase 2 data

Note on Delivery Strategy: In Phase 1, GreenArch will NOT operate its own delivery fleet. Delivery will be fulfilled by the nursery. Same-day delivery will only be surfaced in the UI when the nursery partner explicitly enables it. This avoids over-promising and protects early brand trust.

8. Revenue Model

GreenArch will have multiple revenue streams, introduced in phases to avoid over-monetising before sufficient supply and demand are established.

Revenue Stream	Model	Phase	Est. Rate
Order Commission	% per order	Phase 1	8–12% per order
Gardener Booking Fee	Flat cut	Phase 1	■30–50 per booking
Delivery Fee	User pays	Phase 1	■30–60 per order
Premium Nursery Listing	Subscription	Phase 2	■499–999/month
Subscription Plans	User tier	Phase 3	■199–499/month
Featured Products	Paid placement	Phase 2	■99–299/week

9. Success Metrics & KPIs

Metric	Definition	Target (3 months)
Daily Active Users	Users who open the app/site daily	200+ DAU
Orders Per Day	Completed plant/product orders	5–10/day
Conversion Rate	Visitors who place an order	> 3%
Repeat Customer Rate	Users who order more than once	> 35%
Avg. Order Value	Revenue per completed order	■350–600
Nursery Onboarding	Active nurseries listed	10–15
Delivery Success Rate	Orders delivered without issue	> 90%
Gardener Bookings	Completed gardener service sessions	20+/month
App/Web Rating	Avg. user rating on platform	> 4.2 / 5

10. MVP Scope — Phase 1

The MVP is intentionally lean. The goal is to validate demand and supply-side willingness before building complex features. Everything below must work reliably before Phase 2 begins.

IN SCOPE	OUT OF SCOPE
✓ User registration and login (email + Google OAuth) ✓ Location detection and nearby nursery listing ✓ Basic plant store with product browsing and search ✓ Cart and checkout (COD + UPI via Razorpay) ✓ Gardener profile listing and booking request ✓ Order tracking (manual status updates by nursery) ✓ Nursery Partner Panel (product + order management) ✓ Gardener Panel (profile + booking management) ✓ Admin Panel (user, nursery, order, booking management) ✓ Basic analytics dashboard for admin ✓ Mobile-responsive web app (no native app in Phase 1)	✗ AI-based plant recommendations ✗ Real-time GPS delivery tracking ✗ GreenArch-owned delivery fleet ✗ Native iOS / Android apps ✗ Multi-city scaling ✗ Advanced analytics and ML ✗ Subscription plans (user-side) ✗ Complex loyalty or referral systems

11. Tech Stack

The stack is chosen for speed of development, zero infrastructure cost at MVP stage, and scalability headroom. A solo BTech founder can ship this stack alone.

Layer	Technology	Reason
Frontend	Next.js (React)	Fast, SEO-friendly, great ecosystem
Backend / Auth	Firebase Auth	Free tier, instant setup, secure
Database	Firestore (NoSQL)	Real-time sync, scales well for MVP
File Storage	Firebase Storage	Product images, gardener photos
Maps & Location	Google Maps API	Industry standard, reliable geocoding
Payments	Razorpay	Best UPI + COD support in India
Hosting	Vercel + Firebase	Free tier sufficient for MVP traffic
Notifications	Firebase FCM	Push notifications, free
Analytics	Firebase Analytics	User behaviour tracking, free

12. Launch Roadmap

Phase 0 Validation	Month 0–1	• Talk to 10 nurseries in Greater Noida • Interview 20 potential users (plant owners, apartment residents) • Confirm supply-side willingness and demand signal • Finalize feature scope and wireframes
Phase 1 MVP Build	Month 1–3	• Build user web app (Next.js) • Build nursery partner panel • Build admin panel • Onboard 5 nurseries and 10 maalis for beta • Run closed beta with 50 users

Phase 2 Soft Launch	Month 3–5	• Open to public in Greater Noida • Target 10–15 nurseries, 20–30 gardeners • Run micro-campaigns in residential societies • Collect feedback, fix drop-offs
Phase 3 Growth & Iterate	Month 5–9	• Add premium nursery listings • Launch subscription plans • Explore logistics partnerships • Expand to Noida, then Delhi NCR

13. Risks & Mitigation

HIGH	Nursery Onboarding Resistance Risk: Local nurseries may be offline-first and reluctant to adopt a digital platform. Mitigation: Start with 3–5 nurseries the founder knows personally or can visit. Show them the order flow manually first. Remove friction — founder handles onboarding.
HIGH	Low Demand Density in Greater Noida Risk: Market may be too thin in Phase 1, making unit economics unfeasible early. Mitigation: Validate demand before building. If < 5 orders/day after month 2 soft launch, reassess targeting or expand radius to Noida.
MEDIUM	Delivery Reliability Risk: Nurseries may not have dedicated delivery staff, causing delays and complaints. Mitigation: Set clear SLAs with nursery partners. Only enable same-day if they confirm. Provide training on order handling.
MEDIUM	Quality Control — Maalis Risk: Unverified gardeners can damage user trust quickly if work is poor. Mitigation: Do in-person verification of first 20 maalis. Collect ID proof. Implement mandatory rating after each session with auto-suspension below 3.5.
LOW	Founder Bandwidth (BTech Student) Risk: Balancing college and startup simultaneously is genuinely hard. Mitigation: Fix 2 dedicated hours/day minimum. Use no-code/low-code tools for MVP speed. Recruit 1 co-founder or part-time tech collaborator if possible.

14. Key Differentiators

Differentiator	What It Means	Why It Matters
Hyperlocal First	5–10 km radius focus per city zone	Faster delivery, higher relevance
Supply + Service Combined	Plants AND gardeners in one place	No competitor does both well
Nursery-Fulfilled Delivery	No logistics cost for GreenArch	Asset-light, scalable model
Verified Maali Profiles	Identity-checked, rated gardeners	Trust that WhatsApp groups can't offer

Mobile-First Web	No app install barrier	Faster adoption in target market
Greater Noida Focus	Deep city penetration before expansion	Better supply density than thin city-wide launch

15. Vision Statement

"To become India's most trusted hyperlocal platform for gardening — where every plant lover, every maali, and every nursery finds their place."

Our Mission Pillars

- Make local nurseries discoverable and digitally enabled
- Give gardeners (maalis) a reliable income stream and professional identity
- Give urban plant lovers a single, trusted platform for all gardening needs
- Build a sustainable, profitable green economy at the hyperlocal level
